of Correction**

Sir:

Pursuant to 35 U.S.C. § 254 and 37 C.F.R. § 1.322, this is a request for the issuance of a Certificate of Correction in the above-identified patent. Two (2) copies of PTO Form 1050 are appended. The complete Certificate of Correction involves one page.

The mistakes identified in the appended Form occurred through no fault of the Applicants, as clearly disclosed by the records of the application, which matured into this patent. Enclosed for your convenience is the relevant portion of the Amendment, filed August 21, 2006.

Issuance of the Certificate of Correction containing the corrections is respectfully requested. Since these changes are necessitated through no fault of the Applicants, no fee is believed to be associated with this request. Nonetheless, should the Patent and Trademark Office determine that a fee is required, please charge our Deposit Account No. 19-0733.

Respectfully submitted,

BANNER & WITCOFF, LTD.

Dear Sir:

In response to the non-final office action mailed May 19, 2006, please amend the instant application as set forth herein. No fees are believed due. Should any fees be due, the Commissioner is authorized to charge our deposit account number 19-0733 as may be necessary.

Amendments to the Claims are reflected in the Listing of Claims, which begins on page 2 of this paper.

Remarks/Arguments begin on page 12 of this paper.

JUN 29 2007

9. (Original) The method of claim 1, wherein a modified spectral flux comprises a value of spectral flux averaged over K previous frames, where K is an integer.

10. (Currently Amended) A method for selectively recording music portions of a radio broadcast, comprising:

receiving a radio broadcast consisting essentially of an audio transmission, the audio transmission comprising a plurality of frames;

passing each of the plurality of frames through a filter bank, the filter bank including filters with bandwidths approximately proportional to their center frequencies;

calculating a modified spectral flux value of a feature for at least a subset of the each of a plurality of frames of the audio transmission using the filtered frames;

identifying a start point, the start point being a frame in the audio transmission having a feature-modified spectral flux value bearing a first relation to a threshold value; for the feature;

identifying a stop point, the stop point being a frame in the audio transmission having a feature-modified spectral flux value bearing a second relation to the threshold value; and for the feature; and

recording a portion of the audio transmission bounded by the start and stop points.

11. (Cancelled)

12. (Currently Amended) The method of claim 10, further comprising receiving a recording control signal initiated from a remotely located mobile terminal, and wherein:

said identifying a start point comprises locating, within a buffered portion of the audio transmission, a frame having a feature-modified spectral flux value bearing the first relation to the threshold value, and

said recording comprises copying the portion of the audio transmission received since the start point into another memory.

13. (Original) A machine-readable medium having machine-executable instructions for performing steps comprising:
